

Person-centred care for dementia patients

Student: Ashley Tan Zhi Ruong

Supervisor: Assoc Prof Chan Syin

This project is a system is a management system that makes use of a user friendly interface designed by our team to ease the workload of the care centre's staffs.

Every individual is different. Hence, our team believes that by giving the patients the freedom to indicate their preference, the activities assigned to their schedule will be much more enjoyable for them

PEAR web application used by users to manage patient and has an automated generation function to generate patients' routine and games.

PEAR Android application is used by caregivers & supervisors which aids them in taking care of the patients.

Android game application developed by our PEAR Android Game Development Team

Technologies used:
