

# iWILL: Location Based Mobile Application

## Introduction

iWILL is a mobile application that alerts nearby people who are trained in AED/CPR when an abnormal heart rate is detected from a heart rate monitoring smartwatch.

## Technologies Used

The mobile application was developed on React Native, using technologies such as Bluetooth, Google Maps and Firebase database.

## System Overview

The mobile application constantly monitors the heart rate throughout the day. Specialists will receive a notification that contains details such as the user's location and heart rate condition when an abnormal heart rate is detected within a radius.
